ABOUT ME

Computer Science and Engineering student at Instituto Superior Técnico, driven by curiosity, creativity, dedication and a strong academic record. I build projects both for coursework and on my own initiative, and I'm looking forward to applying my technical skills in a real-world setting while continuing to learn.

EDUCATION

2024 - Present
Instituto Superior Técnico, Lisbon, Portugal

BSc in Computer Science and Engineering

Relevant coursework: Probability and Statistics, Fundamentals of Programming, Algorithms and Data Structures, Computer Architecture, Operating Systems, Data Bases, Computer Networks, Machine Learning.

2021 - 2024
Escola Secundária João de Deus, Faro, Portugal

Ciências e Tecnologias

Graduated with a final average of 18/20 (top of class), discovering a passion for programming and computer science.
Awarded the Academic Merit and Excellence Prize eight times (every year from 5th grade to 12th).

EXPERIENCE

Dev-Team at Núcleo Estudantil de Informática do Instituto Superior Técnico (NEIIST):

- Develop and maintain the NEIIST website, contributing to both frontend and backend features.

Client-Server Pacman: Concurrent multiplayer game engine (C, POSIX)

- Built a multi-threaded C server handling several simultaneous player sessions via named pipes (FIFOs), POSIX semaphores/mutexes, and read-write locks to prevent race conditions.
- github.com/irisgevaristo/Client-server-pacman

Vaccine and Inoculation Management System (C)

- Developed a command-line system to manage vaccine batches, stock, and inoculation records with dynamic memory allocation, a simulated clock, and bilingual (EN/PT) error handling.
- github.com/irisgevaristo/Vaccine-manager

Orbito-n: Strategy board game engine (Python)

- Implemented the board game Orbito using Abstract Data Type (ADT) design, with AI opponents and configurable board sizes from 4x4 to 10x10.
- github.com/irisgevaristo/Orbito-n

Memory Game: Browser-based game (HTML, CSS, JavaScript)

- Built and deployed a responsive card-matching game with single/two-player modes and dynamic theme loading via JSON and the Fetch API.
- github.com/irisgevaristo/Memory-game

SKILLS

- Programming Languages: Python, Java, C/C++, SQL, Prolog, Assembly, HTML, CSS, JavaScript.
- Systems and Concurrency: POSIX threads, semaphores, IPC (named pipes), Unix/Linux.
- Tools and Platforms: Git/GitHub, Wireshark, RStudio, Figma.
- Strong mathematics and statistics foundation.
